GREAVES INNOVATIVE BRAKE DISC FOR 3W

Available for all 3W models (Petrol, Diesel & CNG)

PRODUCT ADVANTAGES

1. Service Cost:

Brake pads need to be replaced after 25000 Km.

2. No Adjustment required:

As disc brake is a self-adjusting braking so it does not require frequent brake setting. Only brake pads need to be changed on its wear.

3. Higher Stopping Power:

Disc Brake has higher stopping power than drum brake as the brake force is applied in both side of the disc i.e. it has two swept area.

4. Greasing Issue:

Liners are free from Grease leakage from the axle.

5. Quick Heat Dissipation:

As the disc is directly in contact with the external environment so the heat formed during braking dissapate quickly and as well as don't leads to heat the wheel and tyre.

6. Wet Condition Braking Surface:

Disc brakes also perform better in wet weather, because centrifugal force tends to fling water off the brake disc and keep it dry.
